PROFESSIONAL SUMMARY

Final-year Computer Science student who builds practical AI systems. At Tech Mahindra I built RAG pipelines, tool-calling agents and automated workflows using Azure OpenAI, Google Gemini, LangChain, n8n and Power Automate. On the data side, I work with Python, SQL, Pandas and Scikit-learn for EDA, feature extraction and classification, and I have a published ML research paper in IEEE Xplore.

EDUCATION

B.Tech, Computer Science and Engineering 2023 – 2027

Manav Rachna International Institute of Research and Studies

CGPA: 8.55/10 (up to 6th semester) | Dean's List (Top 5%), 2024–25 and 2025–26

Senior Secondary & Secondary Education 2021 – 2023

Air Force Golden Jubilee Institute

Class XII (Science): 83.2% (2023) | Class X: 91.4% (2021)

TECHNICAL SKILLS

Programming: Python, SQL, MySQL

ML & Data Science: Scikit-learn, Pandas, NumPy, EDA, Data Preprocessing, Feature Extraction (TF-IDF), Classification, Model Evaluation, Hyperparameter Tuning, Matplotlib, Seaborn

Generative AI & LLMs: Generative AI, LLMs, RAG, LangChain, Agentic AI, Tool Calling, Vector Embeddings, Hybrid Search, Azure OpenAI, Google Gemini

Claude & AI Dev Tools: Claude, Claude Code (agentic coding), MCP Server Integration (Blender), Third-Party API Integration (voice, maps, media, workflow automation), AI-Driven 3D & Animated Video Creation

NLP & Computer Vision: NLP, spaCy, Tesseract OCR, OpenCV, MediaPipe

Automation & Backend: n8n, Power Automate, FastAPI, REST APIs, Streamlit, SharePoint

Tools & BI: Git, GitHub, Power BI, DAX

INTERNSHIP EXPERIENCE

Intern (AI Projects) | Tech Mahindra Jul 2026 – Aug 2026

- Built two AI products, Journey GPT and CAX Studio, covering backend APIs, the AI layer and workflow automation.
- Configured n8n workflows to orchestrate AI agents across Azure OpenAI, Gemini, SharePoint and REST APIs.
- Set up FastAPI and MySQL backends with session-based authentication, so each user can only reach their own data.

AI/ML Intern | 3Skill Jun 2026 – Aug 2026

- Applied data preprocessing, EDA and hyperparameter tuning while training and comparing different ML models.
- Built hands-on projects in Generative AI, Agentic AI and Retrieval-Augmented Generation (RAG).

Data Science Intern | Yhills Jun 2025 – Aug 2025

- Cleaned, analysed and visualised real-world datasets using Python (Pandas, NumPy), SQL and Power BI.
- Ran exploratory data analysis on real datasets and built data-driven projects from the findings.

PROJECTS

CAX Studio | AI-Powered Case Study Discovery Platform Tech Mahindra | GitHub

- Built an AI assistant that finds the right client case study from a plain-English question and opens it live from SharePoint.
- Designed a RAG pipeline with hybrid search over vector embeddings that answers only from case study text, with every citation verified against the source.
- Automated onboarding of new case studies with AI fact-verification, duplicate detection and an approval gate on all content; tested on a library of 25 sample case studies.
- **Tech Stack:** Python, Google Gemini, RAG, Vector Embeddings, Hybrid Search, SharePoint, Power Automate, REST APIs

Journey GPT | AI-Powered Airport Passenger Assistant Tech Mahindra | GitHub

- Built an AI airport assistant for flight status, wayfinding, lounges and baggage/accessibility help in one chat.
- Designed a tool-calling agent that fetches live data, computes routes and checks eligibility on its own, with multilingual voice input and photo-based baggage rule checks.
- Grounded policy and baggage answers in airport documents through a RAG pipeline (Azure OpenAI embeddings + vector store), and scoped all data access to the verified passenger's own booking.
- **Tech Stack:** Python, FastAPI, MySQL, Azure OpenAI (GPT, Vision, Embeddings), LangChain, Vector Store, n8n, REST APIs

Fake Job Posting Detection | ML, NLP & LLM GitHub

- Built a classifier on 17,880 job postings that flags fraudulent ads, reaching an F1-score of 0.87 (92.0% precision, 82.9% recall) and 98.8% accuracy with a class-balanced LinearSVC.
- Cleaned and explored the text data, then converted job descriptions into TF-IDF features for the model.
- Added a Gemini layer that explains each prediction to the user in plain language instead of returning a bare label.
- **Tech Stack:** Python, Pandas, NumPy, Scikit-learn, TF-IDF, LinearSVC, Google Gemini, Matplotlib, Seaborn

Sign Learn | Sign Language Reading Assistant GitHub

- Built a reading aid that turns a photo of a book page into Indian Sign Language (ISL) with OCR and NLP sentence ranking.
- Wrote a rule-based English-to-ISL gloss engine that maps words to official ISL Dictionary clips through exact, fuzzy and fingerspelling matches.
- Played the signs on a 3D avatar driven by MediaPipe pose extraction, so playback works offline at adjustable speed.
- **Tech Stack:** Python, Streamlit, OpenCV, Tesseract OCR, spaCy, MediaPipe

ACHIEVEMENTS & ACTIVITIES

- Published and presented a research paper, “Thermal Comfort Prediction in Green Buildings Using Machine Learning”, at ICAICCIT 2025 (published in IEEE Xplore).
- Top 10 finalist at a hackathon with a sign language accessibility app prototype.
- Participated in DUHacks 4.0, a 36-hour national hackathon, and built an ML-based thermal comfort predictor.
- LinkedIn Campus Ambassador (MRIIRS): promoted LinkedIn Learning on campus and guided peers.
- Hosted and moderated debate sessions at New India Debate.
